# Planar Negative k-Cycle 

Paweł Gawrychowski, Shay Mozes,<br>Oren Weimann

## Planar Negative k-Cycle

Given a directed edge-weighted graph G, Does G contain a negative-weight cycle with at most k edges?

## Planar Negative k-Cycle

Given a directed edge-weighted graph G,
Does G contain a negative-weight cycle with at most k edges?

$\mathrm{k} \geq 4$

## Planar Negative k-Cycle

Given a directed edge-weighted graph G,
Does G contain a negative-weight cycle with at most k edges?

## Planar Negative k-Cycle

> Given a directed edge-weighted graph G ,

Conclusions

## Conclusions

- We give an upper bound of $\min \left\{\tilde{O}\left(n k^{2}\right), O\left(n^{2}\right)\right\}$ and a lower bound (conditioned on the popular min-plus convolution conjecture) of $\Omega\left(n^{2}\right)$ for $k \leq n^{1 / 3}$ and $\Omega\left(n^{1.5} k^{0.5}\right)$ for $k>n^{1 / 3}$.

## Conclusions

- We give an upper bound of $\min \left\{\tilde{O}\left(n k^{2}\right), O\left(n^{2}\right)\right\}$ and a lower bound (conditioned on the popular min-plus convolution conjecture) of $\Omega\left(n^{2}\right)$ for $k \leq n^{1 / 3}$ and $\Omega\left(n^{1.5} k^{0.5}\right)$ for $k>n^{1 / 3}$.

## Conclusions
